

# Surgiline 3000 Surgical Table

Electrohydraulic Ref: M2B 300 0 0

Biçakçılar Surgiline 3000 Surgical Table is designed to accommodate various types of patient positioning required for demanding surgical procedures, with ultimate care to the patient and user safety. Surgiline 3000 Surgical Table is constructed with stainless steel and high quality materials to provide durability and long operating life.

Positions are adjusted with remote control, in a quite and nonvibrating manner at constant speed. In case of any remote control malfunction, control button located on the table base can be used to adjust the table positions. Emergency foot pedal enables the operator to continue giving basic positions in case of power failure.

The tabletop consists of five sections: head, backrest, kidney, seat and leg, each with removable, easy to clean, anti-bacterial, and waterproof polyurethane pads for patient comfort. Cassette tunnel with full length coverage of the table top enables unlimited radiographic exposure. Sliding motion of the tabletop enables use with C-Arm radiological equipment.

The table is equipped with motion sensors that stop movement at range limits.

3000 Surgical Table is equipped with rechargeable battery system. Movements of the table are fed from battery circuit. In case of mains failure, battery power of the table provides approximately 60 complete position changes.

Special brakes and anti-static caster allow ease of mobility and secure fixation. Stainless steel side rails accept a variety of available accessories.

Surgiline 3000 is a state-of-the-art surgical table with superb quality features and competitive pricing. It is an excellent choice for today's demanding surgery theaters.
