**MEDSEAT ELECTRIC.
THE LEADING ENT TREATMENT CHAIR – NOW WITH ERGO-PLUS.**

medseat.

ERGONOMICS PLUS RAISES TREATMENT QUALITY TO A NEW LEVEL.

medseat, with its numerous variants, is the most popular treatment chair in ENT practices worldwide. It has won the trust of many practitioners through its ability to provide high flexibility and variability in a robust form that is easy to use. In addition, we have redesigned it over and over again throughout its product life. Today, in view of the growing scope of treatment in practices, the need for ergonomics for doctor and patient is also growing. It is about much more than just sitting upright, lying comfortably or maintaining a healthy posture for medical diagnosis and treatment. The focus is much more on the features of the treatment chair with an ergonomically movable fold-out step and flexible headrests.

medseat is a compact all-rounder. It takes up little space and is suitable for examinations, advice and treatment, including surgical procedures. In ENT practices, it is an integral part of many practice solutions. But it is also used in dentist, orthodontic or oral surgery practices as well as in plastic surgery.

Ergonomics
Ergonomics is a factor that has traditionally been of fundamental importance at GREINER in product development, construction and quality management. The 2020 innovation award from the Institute for Health and Ergonomics in Nuremberg (Institut für Gesundheit und Ergonomie IGR) confirms the consistent commitment of GREINER medbest in this field.

CONTINUOUS FURTHER DEVELOPMENT IN DETAILED ERGONOMICS.

More than ever, the new generation of the GREINER medseat accommodates your individuality in terms of treatment: Because now you can configure your treatment chair yourself combined with the head and footrest of your choice.

For example, you can decide, tailor-made for your needs, whether you want a synchronized leg section with a guided Ergo fold-out step and the Ergo headrest, whether you need the Vario double joint with a secure hold, or whether you prefer to work with a foot switch or hand switch in the backrest. The optional Quick Assist quick coupling for the head restraint, half or full spherical caps is a very ergonomic and efficient solution for frequent changes in reclining and positioning the patient. These variants only outline a selection of your options, in addition to the choice of colours and covers and a wide range of accessories. medseat is a classic that always stays current with new ideas.

Seat can be rotated 90 ° to the right and left (option), can be locked in any position

MEDSEAT ELECTRIC – TREATMENT CHAIR FOR ENT AND MORE

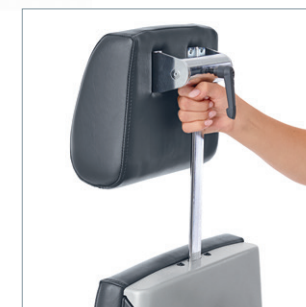

- ♦ medseat with electrical or manual synchronous adjustment of backpart
- ♦ medseat with electrical adjustment of backpart and legpart separately
- ♦ medseat with movable base and electrical or manual synchronous adjustment of backpart
