

WORK STOOLS AND WORK CHAIRS FOR SURGERY, CLINICS AND LABORATORIES.

## MEDICAL WORK STOOLS AND CHAIRS - MADE TO MEASURE.

The variety of the GREINER work stools programme is as versatile as the working life in the medical field. Well known for their "Made in Germany" experience, the stools have been supporting the work of medical professionals 24/7 around the world for years. The range of applications extends from examination and treatment up to the operating room. Both because of their strengths in anatomy, ergonomics, and functionality and because of accommodating GREINER medical chairs for specialist applications. In other words: day after day, GREINER helps to make the everyday work of healthcare better, easier, and healthier. Good seating in the best quality which facilitates processes while strengthening the back.

the fulfilment of hygienic and technical requirements for treatment as well as the varied selection of heights for sitting and upholstery, height adjustment with a 360° manual ring or foot release of the gas spring as well as the choice of base part and castors. Work stools and chairs of high-class quality that retain a long working life are produced at the in-house facilities including a foaming and sewing department. The cover in premium material is extremely comfortable, which noticeably improves the sitting comfort. Of course, all work stools meet the clinical requirements for stability, safety and hygiene, while sustainability in production and permanent spare parts supply are guaranteed.

- version, with swivelling and height-adjustable backrest
- Great comfort and fulfilment of requirements for sterility through innovative height adjustment: ergonomic ring release by hand or a ring-shaped base plate that can be released by foot
- Three different sitting heights to fit body size, seat cushions with a diameter of 36 cm or 40 cm and an angled anatomically-shaped seat edge included
- Models with a full-foam seat and backrest for special hygiene requirements
- Safety castors keep the work stool in position when it is not being moved
- Choice of cover materials compact and premium: see colour pattern card

## A DESIGN TO VITALISE YOUR POSITION.

Sit like a pro so you can work like a pro. Anatomy, ergonomics and functionality characterise the product design of GREINER's work stools and chairs. Modern sitting comfort not only stands for comfortable upholstery and backrests or smooth-running castors - every functional detail also contributes to an active and ergonomic sitting position.

Versatile work stool that suits every treatment chair

Fatigue-free operation thanks to support for arms or torso

Large backrest front face

Foot release with foot ring

Large backrest from the rear

Surgery-compliant equipment Electrically conductive EL 11 with electrical conductivity safety castors, EL 11

Doubtful if anyone will then say "All stools are the same." Let's take a close look at the GREINER work stools' design - from bottom to top: safety castors with/without central locking or sliders? Short, medium or long gas springs for different sitting positions? Height adjustment with manual ring release or "hands-free" by foot? Sitting cushion, padded and sewn by hand - round or anatomically shaped, cover with compact or premium fabric, or a full foam seat super soft, with a hygienic, breathable surface? In addition, the backrest, whether small or large, swivelling as a back/ armrest in the shape of a crescent moon, or completely without it? And finally the question of electrical conductivity of the cover, column and castors that is suitable for surgery? Any other questions? Time to have a look at the details.

# **VARIETY IS KEY - THE BASE PARTS.**

This is what free choice looks like: The base parts of the GREINER work stools and chairs are characterised by their glossy design, quality and seating comfort. Otherwise, they are rather versatile and tailored to your needs. The foot release developed by GREINER, for example, offers high clinical added value wherever sterile or contaminated gloves are used. Triggered by the round pedal plate attached above the 5-star base, it can be operated "hands-free" all around. All work stools have safety castors, on request as an electrically conductive version.

to choice 5-star base made of polished aluminum: for options see below

Manual ring release, 5-star base Manual ring release, foot ring Foot release with foot ring

NexGen design and manual

Modern design with high functionality

Crescent-shaped full foam backrest

Breathable cushion

# **FULL FOAM - PUR(E) ADDED VALUE.**

Being innovative means always re-evaluating products and their benefits against the backdrop of changing requirements or the development of advanced technologies and materials. And if a pioneering generation of materials proves to be ready for the market, they can also be implemented in new products. With the new PUR integral (full) foam, a material from the group of polyurethanes for sitting cushions and backrests is now available for medical use, which in addition to a soft and breathable core has an increasingly firmer texture towards the outside.

Full foam seats guarantee a high level of sitting comfort, a pleasant feeling on the surface, are robust in handling and free of seams - making them very easy to clean and disinfect. The material is light and facilitates "dynamic" sitting where you can actively change your position. Easycare and washable, PUR is characterised by its durability against many types of cleaning agents and disinfectants.

#### Pure dynamic back

The crescent-shaped fixed backrest offers you a secure hold and can also be used as an armrest.

#### Pure innovation

Full foam guarantees a non-slip hold thanks to closed, shock and waterproof surfaces. In addition, it is characterised by its durability against many types of cleaning agents.

#### Pure sitting comfort

The seat with 85 mm thick PUR full foam is pleasantly soft, free of seams and feels particularly good when you have to sit on it for hours.

## WORK STOOLS AND WORK CHAIRS FOR ERGONOMIC SEATING.

Ergonomic sitting comfort that will convince you: the wide range of work stools and chairs with or without backrest boosts your performance when examining and treating patients. GREINER offers you a product range that is processed at the highest quality, which you can select and adapt perfectly with a variety of practical features according to your requirements. In terms of shape and colour, you will definitely find the option that will best fit your environment. In addition, all upholstery fabrics are biocompatible, heat-resistant, disinfectant-resistant, urine and blood-resistant, scratch-resistant, dirt-resistant and durable. The fabric EL 11 "Black" that is suitable for surgeries is made of carbon fibre material and is therefore electrically conductive.

#### Colours and fabrics

GREINER'S cover material is available in two options: "compact", which is characterised by comfort and plenty of options in 20 colours, as well as "premium", the innovative line that sets new standards with its super soft and, at the same time, far more durable surface in 12 colours.

Let us offer you some inspiration: Here is a small selection from the GREINER work stools and chairs' product range. Stools without backrest, chairs with backrest in different designs. Height adjustment by hand or foot. Base parts and sitting heights of your choice. Upholstery materials in a wide variety of colours with compact or premium fabric. Or EL 11 equipment that is suitable for surgeries with electrically conductive components. The choice is yours.

WORK STOOL 54 - 73 cm. Item code 3008305 5-star base polished, sitting cushion Ø 36 cm, cover in compact "Petrol" C435, 360° manual ring release, safety castors.

WORK STOOL 54 - 73 cm.
Item code 4108305 RG 01 PREMIUM HO
5-star base polished with
sliders, sitting cushion ∅ 40 cm,

# AT A GLANCE.

An overview of Greiner work stools and chairs: Choose what you like from sitting cushions, backrests and a large range of sitting heights. The hand or foot release is also a criterion, as is the foot ring. All work stools have a highly polished aluminium 5-star base, a chrome-plated column and safety castors that keep the chair in position at standstill. Electrically conductive versions are also available for almost all models.

# we design quality.

Agreeably health-promoting seating has motivated us since 1922. For decades we have been making high-quality, technically sophisticated couches within the medbest range. Our innovative devices for examination, dialysis, oncology, blood sampling, care and transport are all made in Germany. Our quality commitment is verified by an independently audited quality assurance system: GREINER is certified under DIN EN ISO 9001 and 13485.

Test mark for quality management system
